

# FACT SHEET how to plant a plant

**1** Dig a hole 2x the diameter of the plants pot.

**2** Cultivate/loosen soil at base of hole and throw in a handful of water retention crystals.

**3** Plant into hole and backfill with soil, forming an earthen basin around the base of the plant.

**4** Lay mulch around plant. Ensure mulch is pulled back from base of plant (to avoid rot), then water plant thoroughly.
